

Landlab installation guide

This guide is supplementary to the installation directions provided on the Landlab website:

<https://landlab.csdms.io/installation.html>

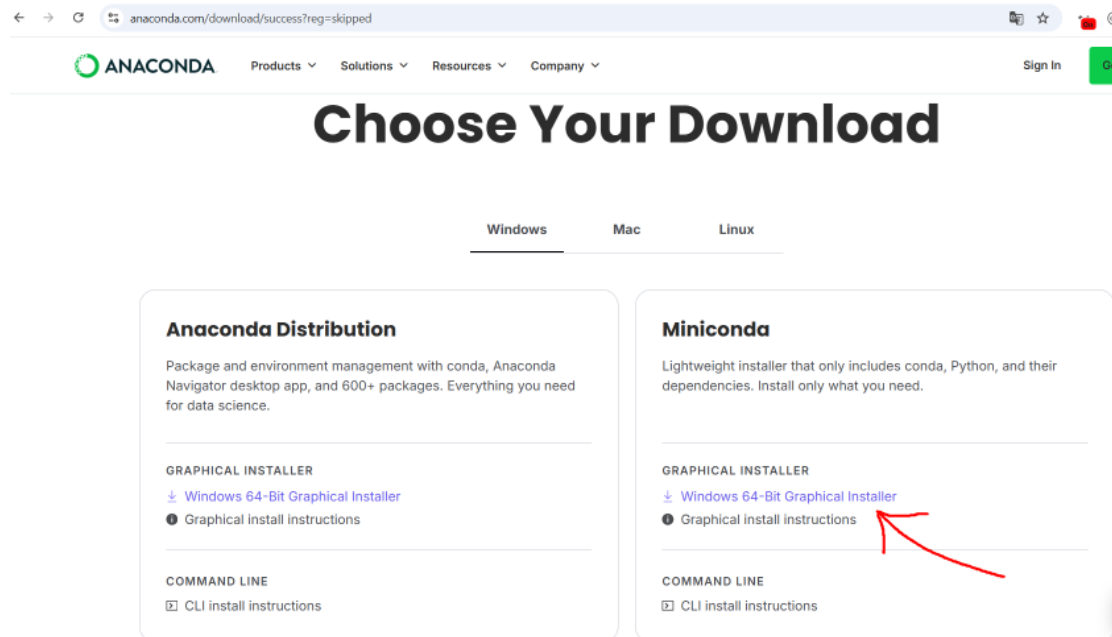

Contents

Step 1. Install miniconda	2
1. Download miniconda (minimal version of Anaconda)	2
2. Open the installer and select the following options when installing	2
Step 2. Create a new, empty environment to install landlab into.....	3
1. Open Anaconda Prompt	3
2. Create a new environment called “landlab”	3
3. Accept the terms of service	4
Step 3. Install landlab into the new environment.....	4
1. Switch your current environment from base to landlab	4
2. Once you have activated the landlab environment, install landlab	4
Step 4. Install Jupyter Notebooks or VSCode.....	4
1. Next, install Jupyter Notebooks into the landlab environment.....	4
2. Alternatively, install VSCode onto your PC	4
Step 5. Clone or download the MassWastingRunout-training-materials repository.....	4
1. Clone or download the repository.....	4
Step 6. Run the notebooks!	5
1. Navigate to the folder where you saved MassWastingRunout-training-materials and open jupyter notebooks by typing “jupyter notebook”	5
2. Or, in VSCode, navigate to the MassWastingRunout-training-materials folder location	6

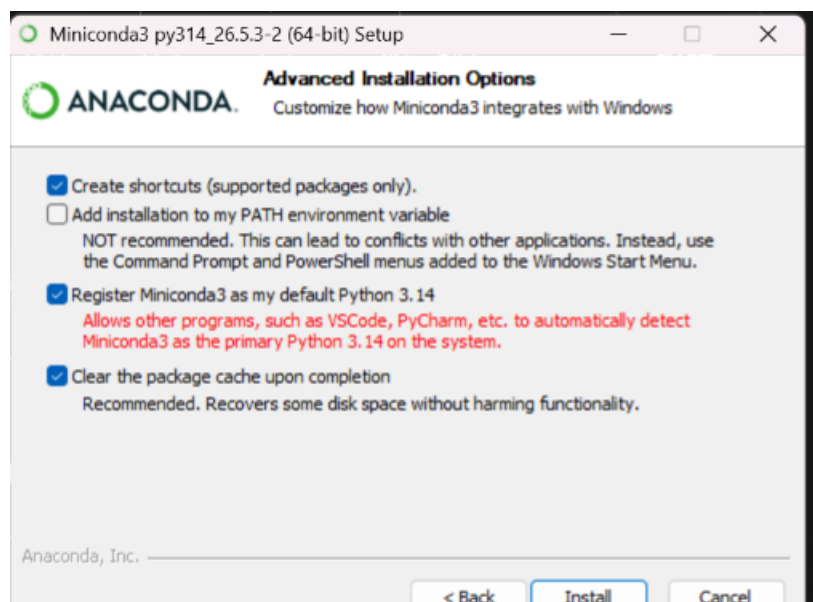

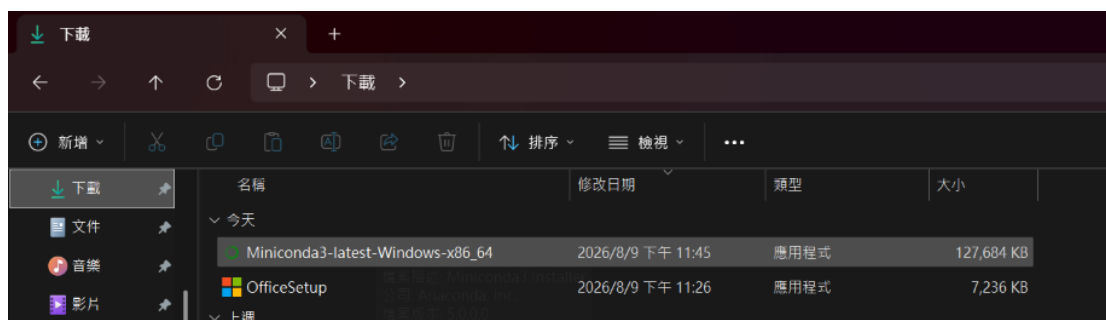

Step 1. Install miniconda

1. Download miniconda (minimal version of Anaconda)

<https://www.anaconda.com/download/success?reg=skipped>

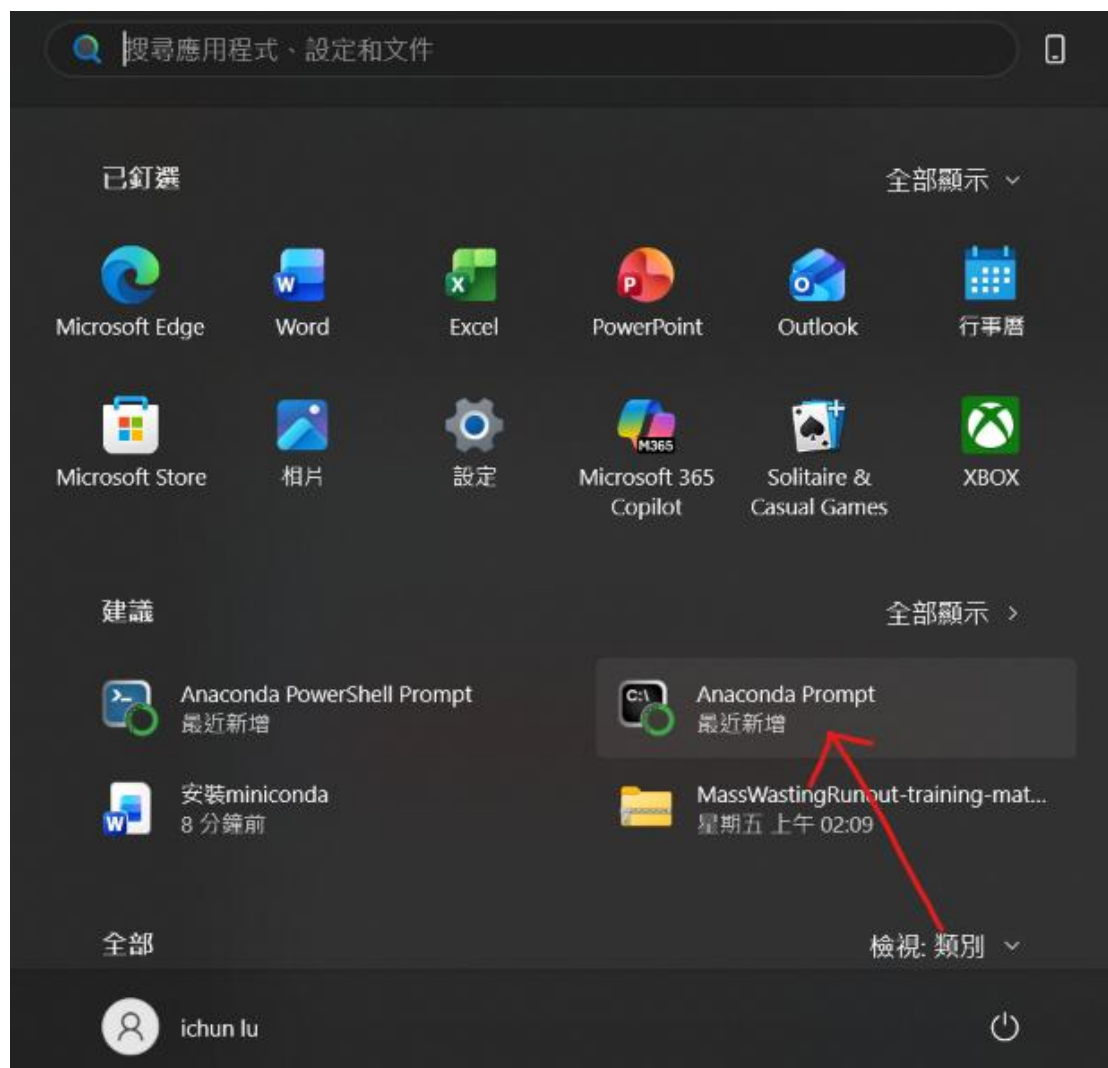

2. Open the installer and select the following options when installing

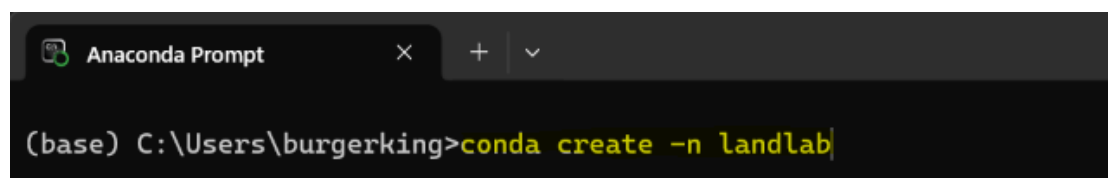

Step 2. Create a new, empty environment to install landlab into

1. Open Anaconda Prompt

2. Create a new environment called "landlab"

"conda create -n landlab"

Note: Installing packages into the base environment may lead to package requirement conflicts.

Additional conda commands for environment management can be found here:

<https://docs.conda.io/projects/conda/en/latest/user-guide/tasks/manage-environments.html>

3. Accept the terms of service

```
Anaconda Prompt - conda ci X + -
(base) C:\Users\burgerking>conda create -n landlab
Do you accept the Terms of Service (ToS) for https://repo.anaconda.com/pkg... [(a)ccept/(r)eject/(v)iew]: a
Do you accept the Terms of Service (ToS) for https://repo.anaconda.com/pkg... [(a)ccept/(r)eject/(v)iew]: a
Do you accept the Terms of Service (ToS) for https://repo.anaconda.com/pkg... [(a)ccept/(r)eject/(v)iew]: a
```

Step 3. Install landlab into the new environment

1. Switch your current environment from base to landlab

“conda activate landlab”

```
(base) C:\Users\burgerking>conda activate landlab
(landlab) C:\Users\burgerking>
```

2. Once you have activated the landlab environment, install landlab

“conda install landlab -c nodefaults -c conda-forge --override-channels”

```
(landlab) C:\Users\burgerking>conda install landlab -c nodefaults -c conda-forge --override-channels
```

Step 4. Install Jupyter Notebooks or VSCode

1. Next, install Jupyter Notebooks into the landlab environment

“conda install anaconda::jupyter”

```
(landlab) C:\Users\burgerking>conda install anaconda::jupyter
```

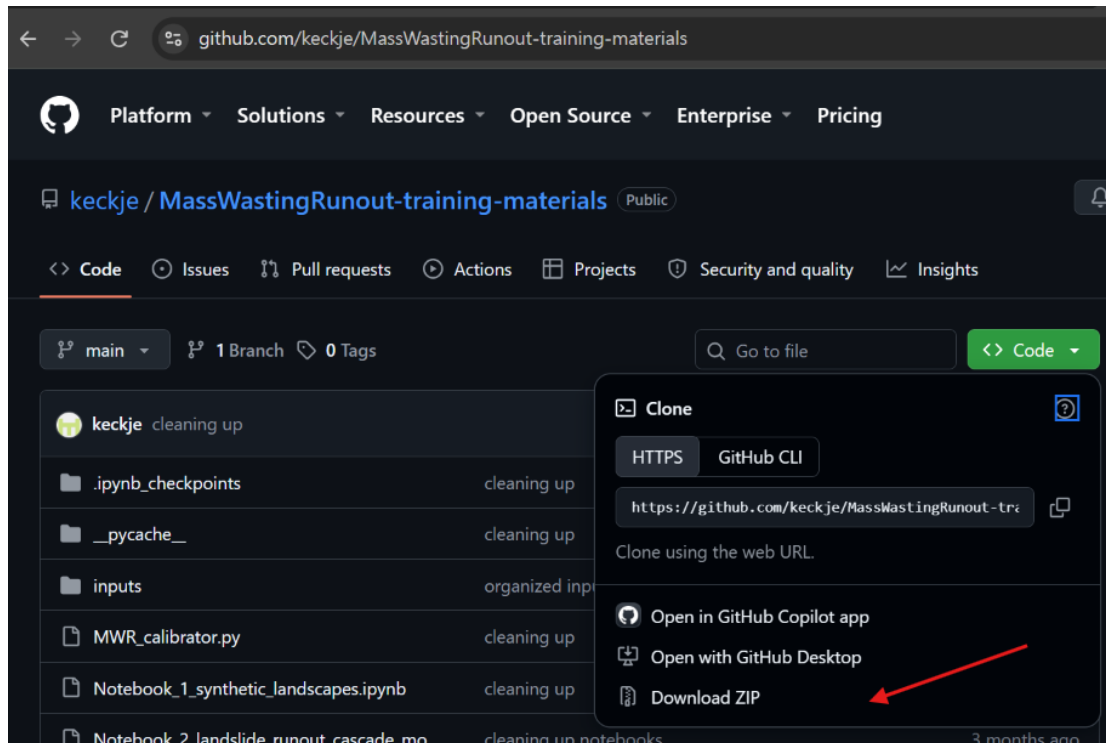

2. Alternatively, install VSCode onto your PC

<https://code.visualstudio.com/>

Step 5. Clone or download the MassWastingRunout-training-materials repository

1. Clone or download the repository

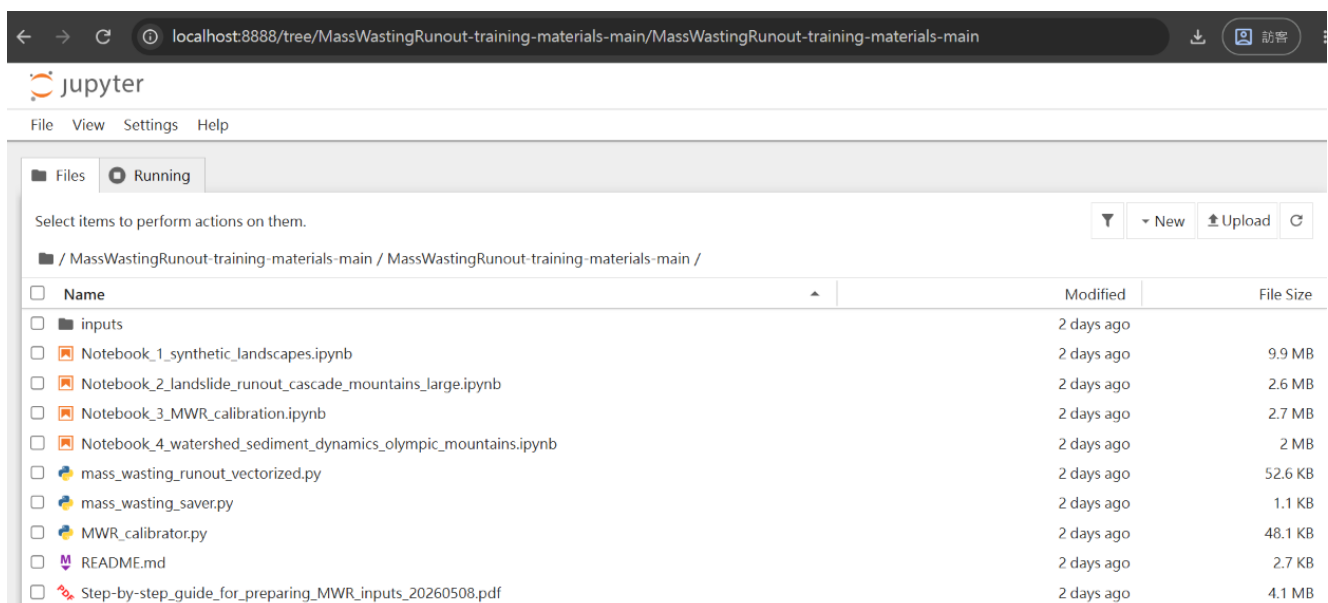

<https://github.com/keckje/MassWastingRunout-training-materials>

Step 6. Run the notebooks!

1. *Navigate to the folder where you saved MassWastingRunout-training-materials and open jupyter notebooks by typing "jupyter notebook"*

```
(landlab) C:\Users\burgerking>jupyter notebook
```

2. Or, in VSCode, navigate to the *MassWastingRunout-training-materials* folder location
